

AI Agent System Tutorial

Understanding Autonomous AI Agents

An AI agent is an autonomous software that can perform tasks,

Chapter 1: What is an AI Agent?

AI agents can perceive, reason, and act autonomously.

They use machine learning to improve over time.

Chapter 2: Types of Agents

- Reactive Agents
- Deliberative Agents
- Hybrid Agents
- Learning Agents

Chapter 3: Real-World Applications

AI agents are used in:

- Customer Service Chatbots
- Robotics and Automation
- Healthcare and Finance

Chapter 4: LLM-Powered Agents

Large Language Models enable agents to understand natural language.

Popular frameworks: LangChain, AutoGen, CrewAI.

Chapter 5: Best Practices

- Define clear goals
- Ensure transparency
- Consider ethics
